Mini-Giles Chapman 2019-04-30 Mini celebrates 60 amazing years of this iconic car, from its revolutionary introduction to the popularity of its new-generation models. The first two-door Mini, introduced in 1959 and built until 2000, revolutionized automotive design with its innovative front-wheel-drive layout that made the car appear bigger on the inside than the outside. In 1999, the Mini was voted the second most influential car of the 20th century, behind the Ford Model T. Designed for British Motor Corporation (BMC) by Sir Alec Issigonis and manufactured in England, Australia, Spain, Belgium, Chile, Italy, Portugal, South Africa, Uruguay, Venezuela, and Yugoslavia, the Mini was as successful in competition as it was on the street, winning the Monte Carlo Rally four times from 1964 through 1967. Originally built by BMC, the Mini's later parent company, Rover, was acquired by BMW in 1994. In 2000, BMW sold most of the Rover Group but retained the Mini brand. The last and 5,387,862nd original Mini rolled off the production line in October, 2000. In July 2001, BMW launched production of the new-generation of Mini which was soon joined by Countryman, Clubman, convertible, Cooper Works, and numerous special editions. Nearly 20 years later, the new Minis remain as popular as the original from 1959.

The 9/11 Commission Report-National Commission O Terrorist Attacks 2010-01-01 It has, improbably, been called uncommonly lucid, even riveting by The New York Times, and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is The 9/11 Commission Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States-which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean-it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts-it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7-it is nevertheless an essential record of one of the most transformational events of modern times.

From the Studio to the Streets-Mary C. Hardin 2006 Architecture should be the ideal field of study for applying to service learning since it requires mastery of theoretical concepts for direct application to human situations and needs. Though architecture has long fostered learning by doing, it is only recently that the field's hands-on aspects have been subjected to more systematic appraisal. This book is the first book to make a formal connection between service learning pedagogy and architectural practice, and to address the related issues, both professional and ethical. This book looks equally at the emergence in the sixties of planning departments out of schools of architecture, and at planning's shift in orientation away from "master planning," elite designers, and signature buildings to the mainstream acceptance of neighborhood-based planning and socially engaged practice. This turn has led to far more widespread adoption of service learning in planning programs. The chapters in this book illustrate how service learning can be used to develop a wide range of professional skills in students, including land use and building condition surveys, zoning analysis, demographic analysis, cost estimating, public presentation, site planning, urban design, participatory design processes, public workshops, and design charrettes as well as measured drawings of existing buildings. The author demonstrates how community design programs are more than service activities; and how they can be models of interdisciplinary teamwork, often involving planners, urban designers, and landscape architects as well as scholars and researchers from related fields. The essays in this book offer insights into both successful initiatives and roadblocks along the way and address the practicalities of the use of this powerful pedagogy.

It is conceptually clear and jargon-free, which is extraordinary among books on administrative ethics."—H. George Frederickson, Stone Distinguished Professor of Public Administration, University of Kansas "Remarkably effective in linking the science of what should be done with a prescriptive for how to actually do it, the fifth edition of Cooper's book keeps pace with the dynamic changes in the field, both for those who study it and those who practice it. The information presented in these pages can be found nowhere else, and it is information we cannot ethically afford to ignore."—Carole L. Jurkiewicz, John W. Ourso College of Business Administration, Public Administration Institute
